

## Refurbishment of STEM room

The physical environment plays a big part in maximising students' learning opportunities and engagement. With that in mind, Katong School recently refurbished the STEM room to better facilitate lessons held there. New storage units were installed to provide greater ease of access to materials, apparatus and manipulatives.

## Refurbishment of STEM room

Movable and interlocking tables with rewritable tops offered flexible seating configurations that can cater to a range of lesson styles from individual workstations to group work. This aids to increase and foster a more interactive, engaging and collaborative environment.

## Refurbishment of STEM room

Newly installed display shelves also offer a place where students can showcase their work proudly. At Katong School, we continuously seek to improve our learning environments and we would like to thank our generous donor, Qualcomm, for making this possible.
